3. The electric railroad excavator factory shown in the above sketch employed perhaps 35 hundred to four thousand workers. The textile factory employed about 10 to 14 thousand workers, and was mainly (90%) on Army work. It produced only unfinished white material - no finished goods. There were no other factories in Kovrov.

4. The following is a sketch of the Degtiarov factory.

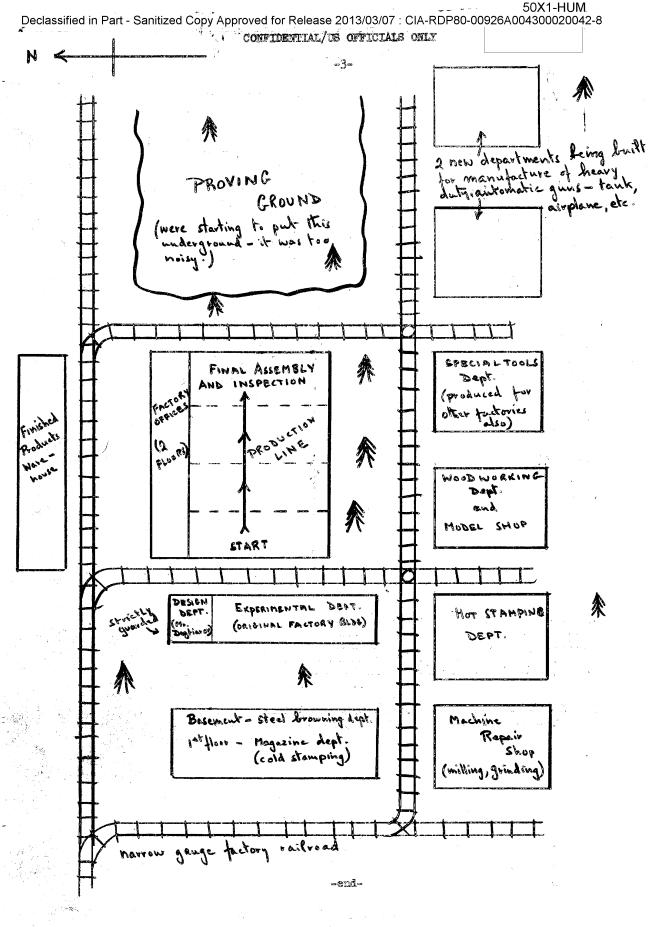

some of the buildings may be miklabeled. Certainly many of them have now been changed:
